

## Ingredient

Sodium Hydroxide

## Benefits

contains special complexing and cleaning agents and corrosion inhibitors for the removal of protein and fat soil. It does not attack stainless steel and can be used repeatedly.

## Target Market

FNB industries

### Clean-In-Place

### General use instruction:

1. Pre-rinse tank/pipeline with water until effluent is clear.
2. Circulate 1 - 2.5 % ALKACIP 20 for 30 - 60 minutes depending on the soil to be removed. Temperature should be from 70 – 80 °C.
3. Rinse until pH is neutral.
4. Sanitize with appropriate sanitizer.
5. Final Rinse (optional: depending on the method of application of the sanitizer to be use)

\*For specific dilution or application, please consult Kalinisan Chemicals representative.

# ALKACIP 20

compound for CIP and soak cleaning of process equipment in the food and beverage industry it contains no phosphorous making it biodegradable
